

EXTENDING ETHERNET UP TO 13KM

The XSLAN+ family of SHDSL switches enables the connection of remote Ethernet networks using a simple copper pair in order to reach data rate up to 15Mbps.

A large range of Ethernet extenders is offered:
Point-to-point, multipoint,
4 SHDSL lines concentrator.

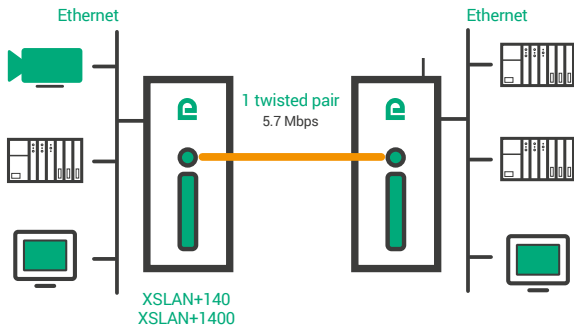

XSLAN+ Ethernet extender

- From 1 to 4 SHDSL ports
- From 2 to 4 Ethernet ports
- Serial gateway (option)
(RS232 and RS485)
- Latency: 2 ms
- IP router
- SNMP, QoS Diffserv
- Bypass feature
- Failsafe ring
(RSTP or proprietary protocol)
- Auto negotiation
- Configuration & diagnostic
via web page

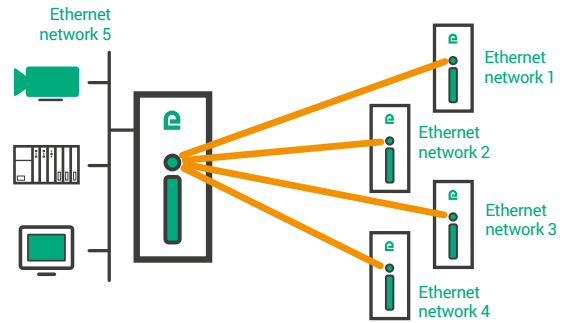

A "PLUG AND PLAY" MODEL

Activation of a point to point connection via 8 DIP switches (XSLAN+140) or web page (XSLAN+1400).

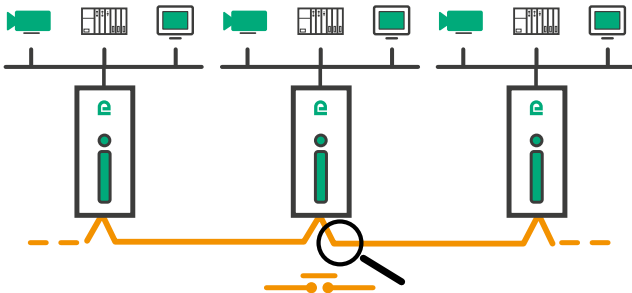

SHDSL LINE CONCENTRATOR

XSLAN+4400 is a 4 lines concentrator to interconnect 4 remote Ethernet networks. The XSLAN+XXX does concentrate 2 lines.

DAISY CHAIN NETWORK

The XSLAN+2400 can be used to build a daisy chain topology via a copper pair.

"The By-Pass"

The "By-Pass" feature is used to close the line (electro-mechanical relay) when the XSLAN+ is switched off. The daisy chain is thus not cut.

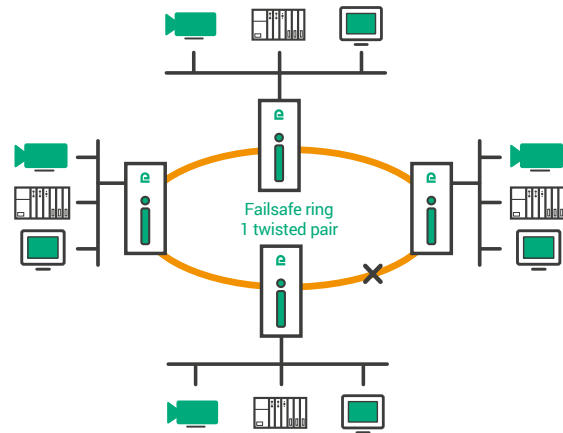

Auto-negotiation

This configuration mode can be used to quickly plug the XSLAN+ to the copper pair without knowing the XSLAN+ status (master or slave).

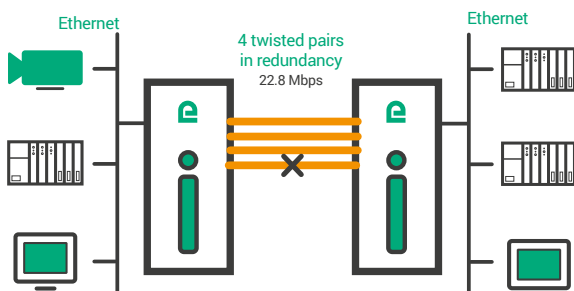

FAILSAFE RING

XSLAN+ is working with RSTP or Etic Telecom protocol in order to build any type of topology with redundancy.

SHDSL LINE AGGREGATION TO INCREASE DATA RATE AND SECURITY

XSLAN+2xxx and XSLAN+42xx can aggregate SHDSL lines to increase the data rate or to offer a line backup.

Loop VPN for secured ring

When the SHDSL network forms a daisy chain and when it is not possible to form a secured ring, the "loop VPN" function allows a network redundancy if an Internet or a private (MPLS) connection is available at each end of the SHDSL network.
